

**HYDRAPONIC GARDEN**

The hydra-ponic garden consists of a large, low metal tank filled with about an inch of water. Over the water is suspended a layer of glass wool into which the space family will place seeds. There are four tanks each with three beds. The crops will consist of: potatoes, peas, carrots, tomatoes, squash, corn and even green onions. Once the suitability of the hydra-ponic garden has been determined the alien soil can be tested for its adaptability to Earth crops. When the Robinsons can plant safely they will have a more than ample food supply.
