Data

Profile-6005

Name: MORROW, PAUL MICHAEL
Date of Birth: OCTOBER 29, 1970
Place of Birth: LONDON, ENGLAND
Assigned Alpha: APRIL 6, 1999
(SECOND TOUR OF DUTY)
Job Assignment: CONTROLLER, MAIN MISSION

Paul Morrow began his career as an Astronaut Cadet in the European Space Exploration Program. His self-confidence and ability to command made him a capable leader on many lunar exploratory missions. He jumped at the chance to partake in the construction of Moonbase Alpha, stimulated by the danger and excitement inherent in the job. The position of Main Mission Controller was his toughest assignment. Quickly proving his worth, Morrow became the Commander's right-hand man. It is his responsibility to oversee the smooth operation of the base. Commander Koenig has at many times felt that Morrow is a younger reflection of himself.

Name: BENES, SANDRA
Date of Birth: MAY 3, 1973
Place of Birth: BRUNEI, BORNEO
Assigned Alpha: MARCH 4, 1999
(FIRST TOUR OF DUTY)
Job Assignment: COORDINATOR OF DATA SECTION

Sandra is a petite, slender 5'2", dark-eyed brunette. Coming from a multi-national background (her father is an Englishman of Hungarian descent and her mother is Burmese), she encountered, as a child, many different languages as her family moved from place to place. Perhaps this is where her interest in communications was born, but her interest in electronics stems from her father, Professor Lawrence Benes. Professor Benes developed the Interstellar Transmitter, a powerful broadcasting device vital for deep space communications. Knowing more about the unit than anyone besides her father, Sandra was a natural choice for the Data Section of Moonbase Alpha. Her expertise and skills allowed her to be quickly promoted to the position of Data Section Coordinator.
